Operative Elbow Surgery E-Book Feb 24 2021 This is an authoritative and comprehensive resource for orthopaedic surgeons and trainees dealing with traumatic and non-traumatic disorders of the elbow. It covers all aspects of elbow surgery from anatomy, biomechanics, investigation and diagnosis, to the latest surgical approaches and implant devices. With full colour illustrations throughout this reference work provides practical instructions to the optimal surgical techniques (both traditional open and minimally invasive) for the full range of common and uncommon elbow disorders. An international team of contributors, carefully selected for their particular expertise discuss their preferred approaches and provide practical guidance on bone and soft tissue reconstruction. Comprehensive review of treatment options. Coverage takes you through basic science and biomechanics right up to the clinical application of the latest surgical techniques and devices.

Outstanding full colour illustrations incorporated throughout. Provides an accurate visual guide to the surgical approaches and techniques under discussion World class team of expert contributing authors from Europe, Asia, Australia and North America. Therapeutic options and preferred methods of treatment are drawn from all over the world. Accompanying video clips of common procedures. Allows the user to see actual exams and procedures as performed by experts

New Research Directions in DNA Repair Dec 17 2022 This book is intended for students and scientists working in the field of DNA repair. Select topics are presented here to illustrate novel concepts in DNA repair, the cross-talks between DNA repair and other fundamental cellular processes, and clinical translational efforts based on paradigms established in DNA repair. The book should serve as a supplementary text in courses and seminars as well as a general reference for

biologists with an interest in DNA repair.

Musculoskeletal Diseases 2021-2024 May 18 2020 This open access book focuses on imaging of the musculoskeletal diseases. Over the last few years, there have been considerable advances in this area, driven by clinical as well as technological developments. The authors are all internationally renowned experts in their field. They are also excellent teachers, and provide didactically outstanding chapters. The book is disease-oriented and covers all relevant imaging modalities, with particular emphasis on magnetic resonance imaging. Important aspects of pediatric imaging are also included. IDKD books are completely re-written every four years. As a result, they offer a comprehensive review of the state of the art in imaging. The book is clearly structured with learning objectives, abstracts, subheadings, tables and take-home points, supported by design elements to help readers easily navigate through the text. As an IDKD book, it is particularly valuable for general radiologists, radiology residents, and interventional radiologists who want to update their diagnostic knowledge, and for clinicians interested in imaging as it relates to their specialty.

Radiation-induced effects and the immune system Jul 12 2022 Numerous developments in molecular biology have led to an explosive growth in the knowledge underlying mechanisms of carcinogenesis, cell signalling, tumor progression and development of metastasis. However, cure of cancer is still hampered by the inherited capacity of tumors to become resistant to standard therapies, to metastasize from their initial location and to proliferate in other tissue compartments. Radiotherapy is one of the main treatment modalities to achieve locoregional tumor control. However, the treatment of distant metastases further remains to be a challenge. In this special topic we are interested to elucidate immunological aspects which are initiated and affected by radiotherapy. We also aim to describe the development of innovative immunological strategies from a preclinical stage to clinical application which could be combined with standard radiotherapeutic approaches. A special interest will also deal with the effects of radiotherapy on tumor initiating cells as well as on the tumor microenvironment. Last but not least the effects of different irradiation sources and qualities such as

photones, protones and heavy ions will be analyzed with respect to immunological outcome.

Planning Algorithms Mar 08 2022 Planning algorithms are impacting technical disciplines and industries around the world, including robotics, computer-aided design, manufacturing, computer graphics, aerospace applications, drug design, and protein folding. This coherent and comprehensive book unifies material from several sources, including robotics, control theory, artificial intelligence, and algorithms. The treatment is centered on robot motion planning, but integrates material on planning in discrete spaces. A major part of the book is devoted to planning under uncertainty, including decision theory, Markov decision processes, and information spaces, which are the 'configuration spaces' of all sensor-based planning problems. The last part of the book delves into planning under differential constraints that arise when automating the motions of virtually any mechanical system. This text and reference is intended for students, engineers, and researchers in robotics, artificial intelligence, and control theory as well as computer graphics, algorithms, and computational biology.

Circulating Fluidized Bed Boilers Mar 16 2020 · Explains operation and scientific fundamentals of circulating fluidized bed (CFB) boilers · Outlines practical issues in industrial use · Teaches how to optimize design for maximum reliability and efficiency · Discusses operating and maintenance issues and how to troubleshoot them This book provides practicing engineers and students with insight into the design and operation of circulating fluidized bed (CFB) boilers through a combination of theoretical concepts and practical experience. An emphasis on combustion, hydrodynamics, heat transfer, and material issues illustrates these concepts with numerous examples from actual operating plants. The relevance of

design and feed-stock parameters to the operation of a CFB boiler are also examined, along with their impacts on designs of mechanical components, including cyclones, air distributor grids, and solid recycle systems. This versatile resource explains how fluidized bed equipment works and how the basic principles of thermodynamics and fluid mechanics influence design, while providing insight into planning new projects, troubleshooting existing equipment, and appreciating the capabilities and limitations of the process. From hydrodynamics to construction and maintenance, the author covers all of the essential information needed to understand, design, operate, and maintain a complete fluidized bed system. It is a must for clean coal technology as well as for biomass power generation.

Proteomics of Spermatogenesis Aug 21 2020 Recent developments of experimental techniques in cellular and molecular biology have made it possible to understand the molecular biology of male gametogenesis in greater detail. This book focuses on the description of specialized proteins, which are dominantly and/or specifically expressed in germ cells and localized in spermatozoa. There is an urgent need to classify proteins of spermatogenic cells with a view of their functions, and their applications in the regulation of fertility and in understanding infertility. The understanding of structural properties of male germ cell specific proteins can offer vulnerable points for targeted intervention in testis without generalized effects on stages of spermatogenesis. Besides targeted action in male germ cells, sperm specific proteins and polypeptides may also offer potential application in the development of a contraceptive vaccine.

Nuclear Science Abstracts Aug 01 2021 NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948 through 1976, pre-dating the prestigious INIS database, which began in 1970. NSA existed as a printed product (Volumes 1-33) initially, created by DOE's predecessor, the U.S. Atomic Energy Commission (AEC). NSA includes citations to scientific and technical reports from the AEC, the U.S. Energy Research and Development Administration and its contractors, plus other agencies and international organizations, universities, and industrial and research organizations. References to books, conference proceedings, papers, patents, dissertations, engineering drawings,

and journal articles from worldwide sources are also included. Abstracts and full text are provided if available.
