Popular Science gives our readers the information and tools to improve their technology and their world. The

core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better. Based on the authors' combined experience of seventy years working on projects around the globe, Construction Equipment Management for Engineers, Estimators, and Owners contains hands-on, how-to information that you can put to immediate use. Taking an approach that combines analytical and practical results, this is a valuable reference for a wide r Celebrate your favorite coffee shop and one of the most iconic television series of all time with Friends: The Official Central Perk Cookbook! Gather your friends on your favorite couch and prepare over 50 recipes inspired by the iconic Central Perk café from the beloved hit sitcom Friends. Friends: The Official Central Perk Cookbook offers a variety of recipes for chefs of all levels. From appetizers and small bites to drinks and desserts, each chapter includes iconic treats from the show and café. The latest in Insight Editions' best-selling line of Friends products has more than 50 recipes and beautiful full-color photography, as well as classic stills and iconic quotes from the show. This will be the year's best home cooking companion for fans of the show that has always been there for you. Set includes revised editions of some issues. This study aims to derive a qualitative model for energy requirements of the wood chipping process. A relationship is shown between energy requirements and properties of biomass, which is a quite variable material. The relationship between comminution machinery and energy which is necessary for the process is highlighted. The derivation of the model is focused on chipping, but it is generally possible to make it available for both different types of biomass (f. ex. agricultural residues) and different types of comminution machinery (f. ex. hammermills) by using different material properties adjusted to the machinery mechanics.

The properties which are used in the derivation are meant to be easy to measure. Furthermore, the model is meant to be used as a base for a quantitative model that, thanks to measurements taken from real comminution machinery and thanks to using wood with known properties, could answer two important questions: - Would hypothetical changes in the desired size of output material increase the total system efficiency, taking into consideration the lowest efficiency of the combustion process (e.g., higher amounts of unburned fuel)? - Considering the energy used for the process, how can comminution as an operation in the biofuel supply chain be optimised? Answers for the above questions could highlight new possibilities in terms of further energy savings and a maximising of the energy efficiency of the bioenergy sector. Furthermore, the results could motivate optimized choices of comminution machinery for the biofuel supply chain as well as for other applications. Another important feature of this study is its unique holistic point of view that takes into consideration aspects from the fields of mechanics, material sciences and natural sciences to deliver the full picture to the reader. Energies is open to submissions for a Special Issue on "Renewable Energy Production from Energy Crops and Agricultural Residues". Biomass represents an important source of renewable and sustainable energy production. Its increasing consumption is mainly related to the increase in global energy demand and fossil fuel prices, but also to a lower environmental impact compared to non-renewable fuels. These factors take RED II directives into consideration. In the past, forestry interventions were the main supply source of biomass, but in recent decades two others sources have entered the international scene. These are dedicated energy crops and agricultural residues, which are important sources of biomass for biofuel and bioenergy. Below, we consider four main

value chains: • Oil crops: Oil production from non-food oilseed crops (such as camelina, Crambe, safflower, castor, cuphea, cardoon, etc.), oil extraction, and oil utilization for fuel production. • Lignocellulosic crops: Biomass production from perennial grasses (miscanthus, giant reed, switchgrass, reed canary grass, etc.), woody crops (willow, poplar, Robinia, eucalyptus, etc.), and agricultural residues (pruning, maize cob, maize stalks, wheat chaff, sugar cane straw, etc.), considering two main transformation systems: 1. Electricity/heat production 2. Second-generation ethanol production • Carbohydrate crops (cereals, sweet sorghum, sugar beets, sugar cane, etc.) for ethanol production. • Fermentable crops (maize, barley, triticale, Sudan grass, sorghum, etc.) and agricultural residues (chaff, maize stalks and cob, fruit and vegetable waste, etc.) for production of biogas and/or biomethane. Publishes in-depth articles on labor subjects, current labor statistics, information about current labor contracts, and book reviews. Current market values for 31,000 listings and 2,000 photographs are included in this publication that has been revised with new toy categories. Having already penned *Getting in the Game*, his inside scoop on the mayhem within baseball's winter meetings, Josh Lewin once again gives baseball fans a window into the big leagues. By interviewing big league ballplayers about their first day in the majors, Lewin creates fascinating mini-biographies of the players, highlighting the personalities hidden behind the on-field accomplishments. He lets the players recount their own memories of how they made it to the big leagues. In *You Never Forget Your First*, Lewin shares the stories of players great and less so. Tony Gwynn recalls singling in his first at bat and finding Pete Rose waiting for him at first base with a wink and a warning: "Don't break my record all at once, kid." Bob Brenly heard of his call-up on the car radio while on a family trip to

the Grand Canyon. He then stood helplessly in the middle of the Arizona desert after his transmission gave out, trying to convince passersby he was a ballplayer heading to the big leagues and needed a lift to the airport. Duane Kuiper witnessed a fight both on the field and in his own clubhouse his first day in Cleveland. Greg Maddux recalls being stuck at the Chicago River drawbridge, convinced he'd never make it to Wrigley Field in time for his debut. Lewin interviews modern star players such as A-Rod, Barry Bonds, and Manny Ramirez, as well as Hall of Famers such as Jim Palmer, Don Sutton, and George Brett. More than 100 popular baseball players are profiled, complete with the box scores of their big league debuts. This microwave primer will show you why you bought a microwave oven in the first place: to save time, money and energy at every meal, every day. Karen Dwyer has created more than 200 recipes that require minimal preparation and commonly available ingredients to make great-tasting: appetizers, fish, meat, and poultry, dishes, casseroles, breakfast foods, vegetables and fruits, candies and desserts, and more. Designed with beginnings cooks in mind, the book features microwave cooking time charts for various foods, a simple explanation of how the microwave ovens. With dozens of tips on making the most of your microwave oven, *Easy Livin'* helps anyone prepare attractive, satisfying family meals in minutes instead of hours.
