An Explication on Broadening the Definition and Scope of Maximum Available Resources Under General Comment 14 of the ICESCR to Include Islamic Taxation in Financing the Right to Health Jan 17 2020 There exists no comprehensive definition on what constitutes "available resources" as envisaged under article 2.1 of the International Covenant on Economic, Social and Cultural Rights. There is also an absence of an extensive discourse on this definition

beyond stating that it refers to both the resources existing within a state as well as those available from the international community through international cooperation and assistance. The definition does not recognize Islamic forms of taxation that are domestically available to an Islamic as well as a secular state. Accordingly, the problem identified in this explication is that of linking zakat, a form of Islamic taxation, to the concept and definition of maximum available resources. The book by Waris argues that there is a link between taxation and human rights (the right to health being among such rights). Waris pushes this proposition to the point of demonstrating the validity of the argument that rights require resources for their realization and subsequent enforcement, but she stops short of discussing the exact fiscal mechanism that could be used for the realization and enforcement of specific rights. This explication having identified this gap aims to advance an argument that allows for broadening the international community understands of what constitutes maximum available resources that a state can utilize to finance the right to health. It proposes the introduction of zakat as a potential method of mobilizing Financial resources domestically available and argues for its inclusion in the definition and scope of maximum available resources.

Definitions, Concepts and Scope of Engineering Asset Management Nov 07 2021 Definitions, Concepts and Scope of Engineering Asset Management, the first volume in this new review series, seeks to minimise ambiguities in the subject matter. The ongoing effort to develop guidelines is shaping the future towards the creation of a body of knowledge for the management of engineered physical assets. Increasingly, industry practitioners are looking for strategies and tactics that can be applied to enhance the value-creating capacities of new and installed asset systems. The new knowledge-based economy paradigm provides imperatives to combine various disciplines, knowledge areas and skills for effective engineering asset management. This volume comprises selected papers from the 1st, 2nd, and 3rd World Congresses on Engineering Asset Management, which were convened under the auspices of ISEAM in collaboration with a number of organisations, including CIEAM Australia, Asset Management Council Australia, BINDT UK, and Chinese Academy of Sciences, Beijing University of Chemical Technology, China. Definitions, Concepts and Scope of Engineering Asset Management will be of interest to researchers in engineering, innovation and technology management, as well as to managers, planners and policy-makers in both industry and government. The Machines of Evolution and the Scope of Meaning Feb 10 2022 A groundbreaking account of the origin and place of meaning in the earthly biosphere. What is meaning? How does it arise? Where is it found in the world? In recent years, philosophers and scientists have answered these questions in different ways. Some see meaning as a uniquely human achievement, others extend it to trees, microbes, and even to the bonding of DNA and RNA molecules. In this groundbreaking book, Gary Tomlinson defines a middle path. Combining emergent thinking about evolution, new research on animal behaviors, and theories of information and signs, he tracks meaning far out into the animal world. At the same time he discerns limits to its scope and identifies innumerable life forms, including many animals and all other organisms, that make no meanings at all. Tomlinson's map of meaning starts from signs, the fundamental units of reference or aboutness. Where signs are at work they shape meaning-laden lifeways, offering possibilities for distinctive organism/niche interactions and sometimes leading to technology and culture. The emergence of meaning does not, however, monopolize complexity in the living world. Countless organisms generate awe-inspiring behavioral intricacies without meaning. *The Machines of Evolution and the Scope of Meaning* offers a reevaluation of both meaning and meaninglessness, uncovering a foundational difference in animal solutions to the hard problem of life.

Philosophy of Science Mar 11 2022 Science is a powerful way to know about the world, but it has its limits. The philosophy of science is the study of the nature and methodology of science. In this sense, it is a branch of epistemology. What do we mean by "the study of"? A typical definition might be something like: "the branch of knowledge concerned with questions about the nature and methods of science." We can see how this fits within the broader scheme by looking at some other areas that fall under epistemology: logic (how are good arguments made?) and ethics (what makes something right or wrong?).

Goal and Scope Definition in Life Cycle Assessment Aug 16 2022 This book describes the importance of the goal and scope phase for the entire LCA study. In this first phase of the LCA framework (ISO standardized), the purpose of the assessment is defined and decisions are made about the details of the industrial system being studied and how the study will be conducted. Selecting impact categories, category indicators, characterization models, and peer review is decided during goal and scope definition. The book provides practical guidance and an overview of LCIA methods available in LCA software. Although not specified in the ISO standards, Attributional LCA and Consequential LCA are presented in order to appropriately determine the goal and scope of an assessment. The book closes with the interconnection between goal and scope definition and the interpretation phase. Example goal and scope documents for attributional and consequential LCAs are provided in the annexes.

History, Definitions, and Scope of Ethnomusicology Jul 15 2022 **Revolutionizing Collaboration Through E-Work, E-Business, and E-Service** Jul 23 2020 Collaboration in highly distributed organizations of people, robots, and autonomous systems is and must be revolutionized by engineering augmentation. The aim is to augment humans' abilities at work and, through this augmentation, improve organizations' abilities to accomplish their missions. This book establishes the theoretical foundations and design principles of collaborative e-Work, e-Business and e-Service, their models and applications, design and implementation techniques. The fundamental premise is that without effective e-Work and e-Services, the potential of emerging activities, such as e-Commerce, virtual manufacturing, tele-robotic medicine, automated construction, smart energy grid, cyber-supported agriculture, and intelligent transportation cannot be fully materialized. Typically, workers and managers of such value networks are frustrated with complex information systems, originally designed and built to simplify and improve performance. Even if the human-computer interface for such systems is well designed, the information and task overloads can be overwhelming. Effective delivery of expected outcomes may not occur. Challenges and emerging solutions in the context of the recently developed CCT, Collaborative Control Theory, are described, with emphasis on issues of computer-supported and communication-enabled integration, coordination and augmented collaboration. Research results and analyses of engineering design methods and complex systems management techniques are explained and illustrated.
