Scania 113 and 143 at Work Feb 21 2023 Patrick Dyer's ninth book in the 'at work' series marks a return to Scania to study the 3-series trucks produced between 1988 and 1996, with the emphasis on the 113 and 143 models. In much the same way as these trucks evolved from the previous 2-series and LB (1-series) so too does the book, taking the story forward from the previous titles covering those ranges. For Scania, masters of the modular system and evolutionary engineering processes, the 3-series represented the pinnacle of development for designs born decades earlier. Industry recognition of its achievement came early with the range being awarded the Truck of the Year title in 1989. With over 200 photographs provided by the manufacturer and enthusiasts, Scania 113 & 143 at Work charts the story of the 3-series through informative text in the popular and familiar style of previous 'at work' titles from the same author.

Sustainability Leadership Mar 10 2022 As CEOs and business leaders navigate a world of complex global challenges, sustainability is no longer optional but a business imperative. In this book, two sustainability leaders with decades of experience – Henrik Henriksson, CEO of Scania and Elaine Weidman Grunewald, Co-founder of the AI Sustainability Center, and former Chief Sustainability & Public Affairs Officer at Ericsson – offer a simple but powerful three-step model for leading an organization on a sustainability transformation journey that aims at big, audacious, world-changing goals. Honest about the dilemmas but bullish on the opportunities, the authors advise leaders on how to accelerate sustainability in their organizations told through a Swedish lens, where the country's values and culture permeate the boardroom and the C-suite, bringing a unique clarity and conviction to leading with integrity. In practical insights gleaned from the authors' own experience, the book takes leaders through the three phases of sustainability leadership: from establishing a solid foundation rooted in purpose, culture, values, principles and consistent, credible leadership, to integrating sustainability into the core

business, and then to executing a vision that not only shifts the direction of the company but can change an entire industry, and even the world. Throughout the book, more than 25 interviews with other leading CEOs of Swedish companies as well as successful start-ups, investors, economists, and other experts illuminate the path to sustainability leadership from different perspectives. These are complemented by case studies describing how companies got it right – or turned themselves around after getting it very, very wrong. With this hands-on insiders' guide, CEOs and C-suite leaders can take sustainability to the next level. This is the encouragement and inspiration business leaders need to move past incremental improvement at a time when exponential, world-changing action is more urgent than ever.

Adaptation in Plant Breeding Oct 13 2019 Plant adaptation is a fundamental

process in plant breeding. It was the first criterion in the initial domestication of plants thousands of years ago. Adaptedness is generally a quantitative complex feature of the plant, involving many traits, many of which are quantitative. Adaptation to stresses like cold, drought or diseases are among the most central problems in a world grappling with global food security. Modern plant breeding, based on mendelian genetics, has made plant improvement more effective and more precise and selective. Molecular genetics and genetic engineering has considerably increased this selectivity down to single genes affecting single traits. The time has come when plant breeding efficiency may cause loss of genetic resources and adaptation. In these proceedings an effort is made to merge modern plant breeding efficiency with ecological aspects of plant breeding, reflected in adaptation. It is hoped that this merger results in more sustainable use of genetic resources and physical environments. The book is based on 10 keynotes addressing a wide spectrum of themes related to adaptation. In addition each subject is further elaborated in up to three case studies on particular plant species or groups of plants. The keynotes do in fact overlap to some degree and there are articles in this volume that seemingly contradict each other, a common aspect in

advanced fields of research. The keen reader may conclude that, in a world where climates and environments are under continuous change and where human society is more and more polarized into a developed and a developing part, adaptation of our cultivated plants has different constraints on yields depending on ecology, and indeed economy.

Toxic Substances in Articles Nov 25 2020 The use of toxic chemicals in articles

is a growing concern for public health and the environment. International trade results in substances being transported among regions. From toys and household items to electronic equipment and automobiles, toxic substances in articles are an increasingly important factor contributing to the global burden of toxic substances. Toxic substances in articles may pose threats at every stage of the product life cycle - production, use, and disposal or recycling. In this report, we consider a factor that is critical for the sound management of substances in articles: the availability of information. At present, there is no global system for provision of information about substances in a wide range of articles. First, the report describes the problem of toxic substances in articles, with detailed case studies of selected examples and considers the advantages that would result from better information management systems. Second, the report considers existing efforts to generate and disseminate information about substances in articles, both regulatory requirements and voluntary initiatives. Third, the report offers suggestions as to the questions and themes that would need to be considered in order to improve management of information about substances in articles.

ERF B C, CP & E-Series at Work Jul 22 2020 Patrick Dyer's eighth book in the 'at work' series takes the reader on a journey with ERF, England's last independent truck manufacturer, between the years 1975 and 1993 with the B, C, CP and E-series trucks that the Sandbach based company produced in the face of overwhelming competition from foreign manufacturers. Apart from the renowned economy, reliability and longevity of the products, the B, C, CP and E-series truck ranges were all linked by the remarkable SP cab, which combined a steel cage with bolt on SMC panels. The system was so revolutionary that ERF patented it. The low cost of design and manufacture allowed it to update and improve its cabs with each series. ERF B, C, CP & E-series at Work draws on over 200 fine photographs from the manufacturer and trucking enthusiasts, which combine with the informative text to tell the remarkable story of these ERF products through some of the most turbulent years of the company's existence.

Sweden and National Liberation in Southern Africa: Solidarity and assistance, 1970-1994 Aug 23 2020 In 1969, the Swedish parliament endorsed a policy of direct assistance to the liberation movements in Southern Africa. Sweden thus became the first Western country to enter into a relationship with organizations that elsewhere in the West were shunned as "Communist" or "terrorist." This book-the first in a two-volume study on Sweden & the regional struggles for majority rule & national independence-traces the background to the relationship. Presenting the actors & factors behind the support to MPLA of Angola, FRELIMO of Mozambique, SWAPO of Namibia,

ZANU & ZAPU of Zimbabwe, & ANC of South Africa, it addresses the question why Sweden established close relations with the very movements that eventually would assume state power in their respective countries. The second volume (later this year) will discuss how the support was expressed, covering the period from 1970 until the democratic elections in South Africa in 1994.
