Introduction to Hardware-Software Co-Design presents a number of issues of fundamental importance for the design of integrated hardware software products such as embedded, communication, and multimedia systems. This book is a comprehensive introduction to the fundamentals of hardware/software co-design. Co-design is still a new field but one which has substantially matured over the past few years. This book, written by leading international experts, covers all the major topics including: fundamental issues in co-design; hardware/software co-synthesis algorithms; prototyping and emulation; target architectures; compiler techniques; specification and verification; system-level specification. Special chapters describe in detail several leading-edge co-design systems including Cosyma, LYCOS, and Cosmos. Introduction to Hardware-Software Co-Design contains sufficient material for use by teachers and students in an advanced course of hardware/software co-design. It also contains extensive explanation of the fundamental concepts of the subject and the necessary background to bring practitioners up-to-date on this increasingly important topic. Industrial research has come under pressure. Will recent budget cuts reduce competitiveness? Based on interviews in Japanese and European high-tech firms it is shown that research supports important potentials. These can be used for project funding, location decisions, and an analysis of sufficient conditions for research success. Careful management of the potentials should improve future competitiveness, and it should help to understand why industrial firms benefit from research and how. In Status of NGOs in International Humanitarian Law, Claudie Barrat examines the legal framework applicable to NGOs in situations of armed conflict.
