The Digital Word Oct 07 2021 This book explores the larger realm of the knowledge infrastructure where texts are received, reconstructed, and sent over global networks. The sixteen essays collected in *The Digital Word* continue Landow and Delany's exploration of the new fluid, digitized text begun in *Hypermedia and Literary Studies* (1991), which focused on the linking of text, graphics, or sound into structures typically bound within a single computer or local-area network. This book explores the larger realm of the knowledge infrastructure where texts are received, reconstructed, and sent over global networks. It covers text management, textual resources and communication, and working with texts. In their introductory essay, Landow and Delany address the impact of such developments as the dematerialization of text (which exists only as a piece of code) and the manipulability of text-based computing (searches, editing, comparison, and analysis), which shifts the balance of power from text to reader. Digital texts; the law, sources, distribution, and management of texts; and the need for new procedures that will make explorations of the boundless universe of text more effective are touched on as well. Current examinations of text management include the FreeText Project and personal information retrieval, a taxonomy of text-management software, and markup systems (including a clear, authoritative discussion of Standard Generalized Markup Languages). Essays in the next section take up such disparate aspects of textual resources and communications as corpus-based linguistics, networked library

services, personal docuverses for the individual scholar, and the new forms of scholarly communications created by electronic mail and electronic conferencing. A concluding section on working with texts surveys what has been variously called computer criticism, computer-aided criticism, and electronic text analysis in relation to textual editing, literary interpretation, and our practice of reading and writing in an electronic age.

Text-based Learning and Reasoning Nov 20 2022 History is both an academic discipline and a school subject. As a discipline, it fosters a systematic way of discovering and evaluating the events of the past. As a school subject, American history is a staple of middle grades and high school curricula in the United States. In higher education, it is part of the liberal arts education

tradition. Its role in school learning provides a context for our approach to history as a topic of learning. In reading history, students engage in cognitive processes of learning, text processing, and reasoning. This volume touches on each of these cognitive problems -- centered on an in-depth study of college students' text learning and extended to broader issues of text understanding, the cognitive structures that enable learning of history, and reasoning about historical problems. Slated to occupy a distinctive place in the literature on human cognition, this volume combines at least three key features in a unique examination of the course of learning and reasoning in one academic domain -- history. The authors draw theory and analysis of text understanding from cognitive science; and focus on multiple "natural" texts of extended length rather than laboratory texts as well as multiple and extended realistic learning situations. The research demonstrates that history stories can be described by causal-temporal event models and that these models capture the learning achieved by students. This text establishes that history learning includes learning a story, but does not assume that story learning is all there is in history. It shows a growth in students' reasoning about the story and a linkage -- developed over time and with study -- between learning and reasoning. It then illustrates that students can be exceedingly malleable in their opinions about controversial questions -- and generally quite influenced by the texts they read. And it presents patterns of learning and reasoning within and between individuals as well as within the group of students as a whole. By examining students' ability to use historical documents, this volume goes beyond story learning into the problem of document-based reasoning. The authors show not just that history is a story from the learner's point of view, but also that students can develop a certain expertise in the use of documents in reasoning.

Text-Based Research and Teaching Aug 17 2022 Contributions in this book illustrate the many methods available for researching language in context and for the analysis of everyday text types. Each chapter highlights language as a resource for the expression of meanings—a social semiotic resource. Text analysis is used to reveal our capacity to formulate multiple meanings for participation in different social practices—in relationships, in work, in education and in leisure. The approach is applied in text-based teaching and in the critical analysis of public discourses. The texts come from different social spheres including banking, language classes, senate hearings, national tests and textbooks, and interior architecture. Text-based research makes a major contribution to Critical Discourse Analysis. The editors and authors of this book demonstrate the value of text analysis for awareness of the role of language for accountable citizenship and for teaching and learning. This book will be of interest to anyone researching in the fields of language learning and teaching, functional linguistics, multimodality, social semiotics, systemic functional linguistics, text-based teaching, and genre analysis, as well as literacy teachers and undergraduate and postgraduate students of linguistics, media and education.

The Lucifer Effect Feb 23 2023 The definitive firsthand account of the groundbreaking research of Philip Zimbardo—the basis for the award-winning film *The Stanford Prison Experiment*. Renowned social psychologist and creator of the Stanford Prison Experiment Philip Zimbardo explores the mechanisms that make good people do bad things, how moral people can be seduced into acting immorally, and what this says about the line separating good from evil. *The Lucifer Effect* explains how—and the myriad

reasons why—we are all susceptible to the lure of “the dark side.” Drawing on examples from history as well as his own trailblazing research, Zimbardo details how situational forces and group dynamics can work in concert to make monsters out of decent men and women. Here, for the first time and in detail, Zimbardo tells the full story of the Stanford Prison Experiment, the landmark study in which a group of college-student volunteers was randomly divided into “guards” and “inmates” and then placed in a mock prison environment. Within a week the study was abandoned, as ordinary college students were transformed into either brutal, sadistic guards or emotionally broken prisoners. By illuminating the psychological causes behind such disturbing metamorphoses, Zimbardo enables us to better understand a variety of harrowing phenomena, from corporate malfeasance to organized genocide to how once upstanding American soldiers came to abuse and torture Iraqi detainees in Abu Ghraib. He replaces the long-held notion of the “bad apple” with that of the “bad barrel”—the idea that the social setting and the system contaminate the individual, rather than the other way around. This is a book that dares to hold a mirror up to mankind, showing us that we might not be who we think we are. While forcing us to reexamine what we are capable of doing when caught up in the crucible of behavioral dynamics, though, Zimbardo also offers hope. We are capable of resisting evil, he argues, and can even teach ourselves to act heroically. Like Hannah Arendt’s *Eichmann in Jerusalem* and Steven Pinker’s *The Blank Slate*, *The Lucifer Effect* is a shocking, engrossing study that will change the way we view human behavior. Praise for *The Lucifer Effect* “*The Lucifer Effect* will change forever the way you think about why we behave the way we do—and, in particular, about the human potential for evil. This is a disturbing book, but one that has never been more necessary.”—Malcolm Gladwell “An important book . . . All politicians and social commentators . . . should read this.”—*The Times* (London) “Powerful . . . an

extraordinarily valuable addition to the literature of the psychology of violence or 'evil.'"—The American Prospect
"Penetrating . . . Combining a dense but readable and often engrossing exposition of social psychology research with an impassioned moral seriousness, Zimbardo challenges readers to look beyond glib denunciations of evil-doers and ponder our collective responsibility for the world's ills."—Publishers Weekly
"A sprawling discussion . . . Zimbardo couples a thorough narrative of the Stanford Prison Experiment with an analysis of the social dynamics of the Abu Ghraib prison in Iraq."—Booklist
"Zimbardo bottled evil in a laboratory. The lessons he learned show us our dark nature but also fill us with hope if we heed their counsel. The Lucifer Effect reads like a novel."—Anthony Pratkanis, Ph.D., professor emeritus of psychology, University of California

Text-based intelligent Systems Sep 18 2022 The symposium on which this volume was based brought together approximately fifty scientists from a variety of backgrounds to discuss the rapidly-emerging set of competing technologies for exploiting a massive quantity of textual information. This group was challenged to explore new ways to take advantage of the power of on-line text. A billion words of text can be more generally useful than a few hundred logical rules, if advanced computation can extract useful information from streams of text and help find what is needed in the sea of available material. While the extraction task is a hot topic for the field of natural language processing and the retrieval task is a solid aspect in the field of information retrieval, these two disciplines came together at the symposium and have been cross-breeding more than ever. The book is organized in three parts. The first group of papers describes the current set of natural language processing techniques used for interpreting and extracting information from quantities of text. The second group gives some of the historical perspective, methodology, and current practice of information retrieval work; the third covers both current and emerging applications of these techniques. This collection of readings should give students and scientists alike a good idea of the current techniques as well as a general concept

of how to go about developing and testing systems to handle volumes of text.

Teaching With Text-Based Questions Oct 19 2022 Help your students navigate complex texts in history/social studies and English language arts! This book shows you how to use a key tool—text-based questions—to build students’ literacy and critical thinking skills and meet the Common Core State Standards. You’ll learn how to ask text-based questions about different types of nonfiction and visual texts, including primary and secondary sources, maps, charts, and paintings. You’ll also get ideas for teaching students to examine point of view, write analytical responses, compare texts, cite textual evidence, and pose their own high-level questions. The book is filled with examples that you can use immediately or modify as needed. Each chapter ends with a reflection section to help you adapt the ideas to your own classroom. What’s Inside: Helpful information on teaching different types of nonfiction texts, including literary nonfiction, informational texts, primary and secondary sources, and visual texts Ideas for locating primary sources Questions students should ask about every text Techniques for soliciting higher-order questions from students Ways to get students to think critically about the relationships between texts Strategies to help students integrate information from different types of sources, a skill that will help students respond to performance tasks on the PARCC and SBAC assessments and DBQs on AP exams Tips for teaching students to write good responses to text-based questions, including how to cite sources and incorporate point of view Ideas for using rubrics and peer grading to evaluate students’ responses Connections to the informational reading standards of the Common Core State Standards for English Language Arts for grades 3-12 and of the Common Core State Standards for Literacy in History/Social Studies, Science, and Technical Subjects

Simulation with Arena May 14 2022 The first edition of this book was the first text to be written on the Arena software, which is a very popular simulation modeling software. What makes this text the authoritative source on Arena is that it was written by the creators of Arena themselves. The new third edition follows in the tradition of the successful first and second editions in its tutorial style (via a sequence of carefully crafted examples) and an accessible writing style. The updates include thorough coverage of the new version of the Arena software (Arena 7.01), enhanced support for Excel and Access, and updated examples to reflect the new version of software. The CD-ROM that accompanies the book contains the Academic version of the Arena software. The software features new capabilities such as model documentation, enhanced plots, file reading and writing, printing and animation symbols.
