This important book—the only complete, one-stop manual on microirrigation worldwide—offers knowledge and techniques necessary to develop and manage a drip/trickle or micro irrigation system. The simplicity of the contents facilitates a technician to develop an effective micro irrigation system. Management of Drip/Trickle or Micro Irrigation includes the basic considerations relating to soil-water-plant interactions, with topics such as methods for soil moisture measurement; evapotranspiration; irrigation systems; tensiometer use and installation; principles of drip/ micro/ trickle irrigation; filtration systems; automation; chloration; service and maintenance; design of drip irrigation and lateral lines; the evaluation of uniformity of application; and an economical analysis for selecting irrigation technology. Contents: 1. Power reactors.--2. Research and test reactors.--3. Fuels and materials facilities.--4. Environmental and siting.--5. Materials and plant protection.--6. Products.--7. Transportation.--8. Occupational health.--9. Antitrust reviews.--10. General. Interior codes and standards reference of choice for designers and architects, updated and revised Completely revised and updated, the seventh edition of The Codes Guidebook to Interiors is the only book devoted exclusively to codes that are applicable to interior designers. The guide features jargon-free explanations of all the codes and standards that are relevant to designers and architects, including performance codes, building and finish standards, energy codes, and

ADA standards. In addition, the dozens of examples and a greatly enhanced set of illustrations, including floor plans, that clearly show how codes apply to real-world projects. Written by Katherine E. Kennon (a professional architect and facilities planner) and Sharon Koomen Harmon (a professional interior designer and educator) are experts on interior design and architecture codes. Updated coverage contains the most recent ICC codes, including the International Building Code and new material on the ICC International Green Construction Code, as well as the NFPA's most recent Life code. The authors address a wide variety of building and project types (large and small) and they offer information on single family homes and historical and existing buildings. The seventh edition includes:

- Easy-to-navigate format geared toward the code process as a whole
- A step-by-step guide through the codes relevant at each stage in the design process
- The newest changes to the ADA Standards and ICC/ASI accessibility requirements
- A companion site that offers interactive checklists, flashcards, PowerPoint lecture slides, and an Instructor's Manual

Having all applicable codes in a single resource saves hours of research time, and can dramatically reduce the potential for costly planning oversights. Whether renovation or new construction, small or large, codes apply to every project. The Codes Guidebook for Interiors provides designers with the comprehensive information they need to stay up-to-date. While there is no "perfect" solution or absolute zero risk, engineering design can significantly reduce risk potential in the CPI. In Guidelines

for Design Solutions to Process Equipment Failures, industry experts offer their broad experience in identifying numerous solutions to the more common process equipment failures including inherent safer/passive, active, and procedural solutions, in decreasing order of robustness and reliability. The book challenges the engineer to identify opportunities for inherent and passive safety features early, and use a risk-based approach to process safety systems specification. The book is organized into three basic sections: 1) a technique for making risk-based design decisions; 2) potential failure scenarios for 10 major processing equipment categories; and 3) two worked examples showing how the techniques can be applied. The equipment categories covered are: vessels, reactors, mass transfer equipment, fluid transfer equipment, solids-fluid separators, solids handling and processing equipment, and piping and piping components. Special Details: Hardcover book plus 3.5" diskette for use in any word processing program with design solutions for use in PHAs. Protection Officer Training Manual, Fifth Edition is a guidebook that provides a comprehensive coverage of security practice. The book is comprised of 27 chapters that are organized into 10 units. The coverage of the text includes various security procedures, such as patrolling, traffic management, and crowd control. Security threats are also covered, including explosives, fire, and hazardous substances. The book also covers emergency or high-risk situation, such as V.I.P. protection, crisis intervention, and first aid administration. The text will be most useful to security

trainee and instructors. Individuals involved in administrative and management position will also benefit from the book. Over 2,300 total pages ... Titles included: Marine Safety Manual Volume I: Administration And Management Marine Safety Manual Volume II: Materiel Inspection Marine Safety Manual Volume III: Marine Industry Personnel This book establishes a proper firefighting mindset and promotes maintaining preparedness for the extreme physical and mental demands of firefighting operations in high-rise and standpipe-equipped buildings ... Among the many valuable topics covered in this book are: standpipe system pressure regulating devices, pressure restricting devices and pressure reducing valves; cautious and disciplined elevator use during high-rise operations; elevator rescue operations; proper engine company suppression selection, including techniques to operate more powerful firefighting weapons with limited manpower; air support operations during high-rise emergencies, with or without an internal resource. This manual presents the fundamentals of turf and landscape irrigation. Dealing with the design of permanently installed, automatic in operation, landscape irrigation systems, the author includes information on the basic elements of engineering a system, and also the detailed process of design and explanation of factors for consideration in each phase of system development. Example designs of residential, industrial and golf course systems are provided to cover the practical application of standard irrigation products and related requirements of design. Over 3,700

Operations – 101 A comprehensive training and reference
manual used as a textbook in maritime institutions.

Addresses the prevention, control, and extinguishing of fires
aboard commercial vessels and on offshore drilling rigs.

Includes chapters on emergency procedures and
equipment as well as case studies of past shipboard fires.

Generously illustrated with drawings, photos, diagrams,
tables, and checklists. Recommended reading for all
maritime personnel and kept both in shipboard reference
libraries and in the offices of maritime executives. Don't let
your jobs be held up by failing code inspections. Smooth
sign-off by the inspector is the goal, but to make this ideal
happen on your job site, you need to understand the
requirements of latest editions of the International Building
Code and the International Residential Code.

Understanding what the codes require can be a real
challenge. This new, completely revised Contractor's Guide
to the Building Code cuts through the legalese of the code
books. It explains the important requirements for residential
and light commercial structures in plain, simple English so

you can get it right the first time. This important new manual goes beyond the published NFPA standards on installation of standpipe systems to include the rules in the International Building Code, municipal fire codes, the National Fire Code of Canada, and information on inspection, testing, and maintenance of standpipe systems. Also covered are the interactions between standpipe and sprinkler systems, since these important fire protection systems are so frequently installed together. Illustrated with design examples and practical applications to reinforce the learning experience, this is the go-to reference for engineers, architects, design technicians, building inspectors, fire inspectors, and anyone that inspects, tests or maintains fire protection systems. Fire marshals and plan review authorities that have the responsibility for reviewing and accepting plans and hydraulic calculations for standpipe systems are also an important audience, as are firefighters who actually use standpipe systems. As a member of the committees responsible for some of these documents, Isman also covers the rules of these standards and codes as they are written, but also provides valuable insight as to the intent behind the rules. A noted author and lecturer, Professor Isman was an engineer with the National Fire Sprinkler Association (NFSA), is an elected Fellow of the Society of Fire Protection Engineers (SFPE), and currently Clinical Professor in the Department of Fire Protection Engineering at University of Maryland. /div Over 19,000 total pages ...
