Adaptive Modelling, Estimation and Fusion from Data Mar 29 2021 This book brings together for the first time the complete theory of data based neurofuzzy modelling and the linguistic attributes of fuzzy logic in a single cohesive mathematical framework. After introducing the basic theory of data based modelling new concepts including extended additive and multiplicative submodels are developed. All of these algorithms are illustrated with benchmark examples to demonstrate their efficiency. The book aims at researchers and advanced professionals in time series modelling, empirical data modelling, knowledge discovery, data mining and data fusion.

Handbook of Reinforcement Learning and Control Dec 14 2019 This handbook presents state-of-the-art research in reinforcement learning, focusing on its applications in the control and game theory of dynamic systems and future directions for related research and technology. The contributions gathered in this book deal with challenges faced when using learning and adaptation methods to solve academic and industrial problems, such as optimization in dynamic environments with single and multiple agents, convergence and performance analysis, and online implementation. They explore means by which these difficulties can be solved, and cover a wide range of related topics including: deep learning; artificial intelligence; applications of game theory; mixed modality learning; and multi-agent reinforcement learning. Practicing engineers and scholars in the field of machine learning, game theory, and autonomous control will find the Handbook of Reinforcement Learning and Control to be thought-provoking, instructive and informative.

Influencing Organizational Effectiveness Jul 13 2022 In this book Linda Holbeche offers an historical narrative on the changing landscape of work since the 1980s and considers how definitions of

organizational effectiveness have changed over time. She considers the characteristics and effects of the neo-liberal work culture of new capitalism, and how HRM practices have contributed to shaping this work culture. *Influencing Organizational Effectiveness* challenges mainstream thinking around business strategy, change and organizational effectiveness, and about the roles of HRM and management. While the overall tone of the book is critical, Holbeche argues that HRM can play an active role in giving voice to employees and advancing organizational effectiveness. Grounded in research, this book includes reflective questions, case studies and helpful guidelines to support HRM and organizational development professionals and master's-level students. It illustrates what 'better' might look like and how HRM can contribute to a new definition of effectiveness which is aligned to the needs of modern organizations.

Childhood Today Apr 17 2020 "This is an urgently needed book that explores a number of different concepts of childhood in 21st century. The book throughout considers enduring topics and new concepts of childhood, and initiates a number of questions that students of education, childhood and early childhood studies can engage as lines of inquiries. The book offers a multidisciplinary approach of the child today, that influences practice, policy, and education, and offers diverse dimensions to provoke our thinking." - Dr. Ioanna Palaiologou, Institute of Education, University College London How we understand what 'childhood' means in today's society is constantly changing, and the rate of this change is unprecedented. This new edited book explores what it really means to be a child of the 21st century, and how we as professionals, researchers, parents and adults can understand an environment seemingly in constant flux. Each chapter seeks to explore and problematise some of the different 'labels' that we give to children in an attempt to understand their contemporary experiences. From the Regulated Child to the Stressed Child to the Poor Child the book covers a wide array of key issues in contemporary childhood, including obesity, risk, special needs, wellbeing and poverty. The pace of change in childhood can be daunting but this book helps students, practitioners and researchers to explore and understand the variety of issues affecting children in the UK and all over the world.

Higher Education in South Africa May 31 2021 Higher Education in South Africa should be of considerable interest to higher education researchers outside of South Africa, as well as within, for the general and comparative assessments it makes. The South African higher education researchers included within its covers have clearly engaged with research and writing from many parts of the world, which they have then applied to make sense of their own condition. - Malcolm Tight Lancaster University, UK

Brand Identity Factors: Developing a Successful Islamic Brand Feb 14 2020 Master's Thesis from the year 2012 in the subject Business economics - Marketing, Corporate Communication, CRM, Market Research, Social Media, grade: Distinction (D3), Edinburgh Napier University, language: English, abstract: The market for Islam-compliant products is getting highly important, due to the high impact of religious obligation on Muslim consumer behaviour. No research is conducted on the question on how to create brand identity from a Muslim perspective in order to attract Muslim consumers. Therefore, this research aims to find a set of brand identity factors which can be used to create brands which are perceived as Islamic. Based on relevant literature, eight factors were found to be relevant. This set of brand identity factors is verified through a mixed research approach. Interviews with experts on Islamic branding help to understand these brand identity factors from an expert point of view, whereas a survey verifies brand identity factors from a consumer perspective. Findings show that the

tangible factor "Halal certificate" is the most important factor to perceive a brand as Islamic. Additionally, brand logo and brand name influence consumers' perceptions. Intangible factors, such as brand values, brand origin and brand relationship, are also found to be important. Findings also show that testimonials and brand slogan are not highly important. Based on these findings, the Muslim Brand Identity Model has been developed which can be used to balance brand identity factors in order to create a successful brand. It can be recommended to brand managers, consultancies and advertising agencies to ensure that the brand is strictly following Islamic standards and regulations in order to be successfully perceived as Islamic.

T-62 Main Battle Tank 1965-2005 Apr 10 2022 The Soviet Army hastily developed the T-62 in a struggle to compete against the rapid proliferation of NATO tanks in the 1960s. It was essentially a modification of the widely-manufactured T-55 tank with the addition of a new 115mm gun. Within the USSR itself, the T-62 was quickly superseded, but it was widely exported, becoming a critical component of the Egyptian and Syrian armies in the 1973 Yom Kippur conflict and heavily influenced later designs of the M1 Abrams and Challenger tanks. In the first English-language history of this tank, Steven Zaloga examines the development of the T-62 using detailed combat descriptions to bring to life the operational history of this tank from the deserts of the Sinai to the harsh terrain of Afghanistan.

Water and Life Nov 05 2021 Reflecting a rich technical and interdisciplinary exchange of ideas, *Water and Life: The Unique Properties of H₂O* focuses on the properties of water and its interaction with life. The book develops a variety of approaches that help to illuminate ways in which to address deeper questions with respect to the nature of the universe and our place within it. Grouped in five broad parts, this collection examines the arguments of Lawrence J. Henderson and other scholars on the "fitness" of water for life as part of the physical and chemical properties of nature considered as a foundational environment within which life has emerged and evolved. Leading authorities delve into a range of themes and questions that span key areas of ongoing debate and uncertainty. They draw from the fields of chemistry, biology, biochemistry, planetary and earth sciences, physics, astronomy, and their subspecialties. Several chapters also deal with humanistic disciplines, such as the history of science and theology, to provide additional perspectives. Bringing together highly esteemed researchers from multidisciplinary fields, this volume addresses fundamental questions relating to the possible role of water in the origin of life in the cosmos. It

supports readers in their own explorations of the origin and meaning of life and the role of water in maintaining life.
