Crane Safety on Construction Sites (ASCE Manuals and Reports on Engineering Practice No. 93) was written to aid the construction industry in the management of crane operations. Crane operations in construction range from unloading and setting equipment on a one-time basis to using numerous cranes that perform multiple tasks on larger complex projects. This manual addresses these variables by clearly defining and assigning crane management responsibilities. It discusses issues such as safety plans, responsibilities, supervision and management, operations, training, manufacture, crane safety devices, and regulations in some detail as they relate to crane management. Appendixes are provided that list additional resources, manufacturers of crane safety devices, and explore case studies of crane accidents. This analysis is directed at the mobile crane operator. It identifies tasks and sub-tasks performed, arranged in blocks of distinct operations relevant to that occupation. These blocks include workplace safety, communication, equipment inspection and maintenance, rigging, pre-lift planning, site preparation and crane set-up, crane assembly and

transport, and operation of different types of cranes. For each task, the document outlines the element of skill and knowledge needed to perform the task adequately, identifies any shifts or changes in technology that affect the task, lists tools and equipment required for the task, and provides an indication of whether the task has been validated by each province and territory. The appendix includes a list of tools and equipment used in the occupation, and a tabulation of the percentage of time a worker spends performing each block and task in a given year (by province/territory and for Canada as a whole). Cranes, Lifting equipment, Materials handling equipment, Vocabulary, Terminology, Bridge-type cranes, Gantry cranes This document contains information on a training course for operators of lifting machinery such as the crane.
