Impulse-Control Disorders Apr 12 2022 Have you ever known that you shouldn't do something, but just couldn't stop yourself? Of course you have! Perhaps you couldn't resist having one more piece of birthday cake. Maybe your brother or sister made you so mad that you couldn't help yelling. Everyone experiences uncontrollable impulses like these sometimes. But what if these impulses happened to you all the time? How would you interact with your family, do your work at school, or make friends if you couldn't control your impulses? Jeremiah, for instance, loved fire. He loved everything about it—the way it looked, the way it smelled, how its heat enveloped everything. Even though he knew it was wrong, Jeremiah lit fires and watched them incinerate, eat, and destroy everything in their paths. Jeremiah also liked the smoke detectors in his house. He loved taking them apart. Sometimes, after school, Jeremiah would sit in his room, dismantle the smoke detector piece by piece, and then put it back together. Once the smoke detector was reassembled, Jeremiah would light a match beneath it and time how many seconds it took before the detector let out its high-pitched squeal. People like Jeremiah cannot control all the impulses they feel. Some people may get uncontrollably angry, steal, light fires, gamble, pull their own hair, or perform other impulsive actions that are harmful to themselves, their families, and their friends. When a person has repetitive impulses like these, he may be suffering from a psychiatric condition known as an impulse-control disorder. The stories and information in this book will tell you more about impulse-control disorders, how they affect people's lives, and how they can be treated.

Model for Optical-laser-induced Impulse in Vacuo Feb 16 2020 A simple model, along with its derivation, is presented for calculating the impulse from targets in a vacuum exposed to single-pulse, optical lasers. Figures demonstrate that throughout most of the range of interest, results from the model agree well with experimental data and LASNEX radiation-hydrodynamic computer code calculations. The model assumes isothermal blowoff and thus takes advantage of the insensitivity of impulse to energy distribution within the ablated mass. The density profile in the blowoff is estimated and the Saha equation is used to evaluate the degree of ionization. The laser absorption coefficient and thermal radiation opacity are evaluated as a function of position in the blowoff in order to evaluate the energy reaching the ablation surface. An overall energy balance plus an energy balance at the ablation surface are used to determine the blowoff mass and temperature. The success of the model indicates that the impulse is insensitive to detailed interactions in the vicinity of the ablation surface. 11 refs., 6 figs.

High Power Impulse Magnetron Sputtering Jan 17 2020 High Power Impulse Magnetron Sputtering: Fundamentals, Technologies, Challenges and Applications is an in-depth introduction to HiPIMS that emphasizes how this novel sputtering technique differs from conventional magnetron processes in terms of both discharge physics and the resulting thin film characteristics. Ionization of sputtered atoms is discussed in detail for various target materials. In addition, the role of self-sputtering, secondary electron emission and the importance of controlling the process gas dynamics, both inert and reactive gases, are examined in detail with an aim to generate stable HiPIMS processes. Lastly, the book also looks at how to characterize the HiPIMS discharge, including essential diagnostic equipment. Experimental results and simulations based on industrially relevant material systems are used to illustrate mechanisms controlling nucleation kinetics, column formation and microstructure evolution. Includes a comprehensive description of the HiPIMS process from fundamental physics to applications Provides a distinctive link between the process plasma and thin film communities Discusses the industrialization of HiPIMS and its real world applications

Focal Impulse Theory Jan 09 2022 Music is surrounded by movement, from the arching back of the guitarist to the violinist swaying with each bow stroke. To John Paul Ito, these actions are not just a visual display; rather, they reveal what it really means for musicians to move with the beat, organizing the flow of notes from beat to beat and shaping the sound produced. By developing "focal impulse theory," Ito shows how a performer's choices of how to move with the meter can transform the music's expressive contours. Change the dance of the performer's body, and you change the dance of the notes. As Focal Impulse Theory deftly illustrates, bodily movements carry musical meaning and, in a very real sense, are meaning.

The Impulse Factor Sep 05 2021 Some people can take risks - move abroad, switch careers, and give up everything to chase their dreams - with hardly a second thought. For others, looking before they leap is vital to making even simple decisions. In his first book, Nick Tasler, research and

development director for cutting-edge think tank TalentSmart, turns conventional wisdom on its head by explaining that there are actually two factors that determine whether an individual will be impulsive or cautious. The first is genetic, and the second is Tasler's theory of Conditional Impulsivity, in which the gravity of a particular situation can trigger unusually risky responses from a cautious person. More than just a book, *The Impulse Factor* provides a clear understanding of why we make the choices we do - and the tools to turn those decisions into something great.

Impulse Aug 16 2022 When you make a decision or form an opinion, you think you know why. But you're wrong. The truth is that most of our mental activity actually happens below the level of conscious thought. In this groundbreaking book, Dr David Lewis, director of the cutting-edge research agency Mindlab International, explores this incredible phenomenon. Delving into the mysteries of the 'zombie brain' that each of us possesses, he demonstrates how unconscious neurological processes underpin every aspect of our lives, from whether or not we find someone sexually attractive to how we resist (or give in to) temptation. In the process he shows how finger length is a reliable predictor of risk-taking behaviour, how seeing the logos of fast food chains can make you more impatient, and how holding a warm drink makes you find strangers more likeable. Above all, he reveals the practical applications of this emerging field of research, giving us insights into such diverse areas as child development, anti-social activities like rioting, successful dieting, and even the ways that supermarkets make us spend more. We may not be conscious of our impulses but it is clear that we can no longer afford to be ignorant of them.

Impulse Mar 11 2022 Impulse explores what people do despite knowing better, along with snap decisions that occasionally enrich their lives. This eye-opening account looks at two kinds of thinking--one slow and reflective, the other fast but prone to error--and shows how our mental tracks switch from the first to the second, leading to impulsive behavior.

The Conduction of the Nervous Impulse (Classic Reprint) Nov 26 2020 Excerpt from *The Conduction of the Nervous Impulse* In one sense it has been obvious from the first that the student of the central nervous system has common interest with the investigator of peripheral nerve. One of the chief concerns of the latter is to discover the physico-chemical change which is the basis of conduction; and, as Sherrington has said, the intimate nature of conduction is a problem coextensive with the existence of nerve cells, and enters into every question regarding the specific reactions of the nervous system. But when the student of conduction in peripheral nerve leaves aside the physico-chemical theory of the nervous impulse and attempts merely to investigate in detail the phenomena of conduction, then it has seemed to many that his work becomes academic, and loses touch with the great human interests of the nervous system. Conduction in peripheral nerves is a rigid affair, seeming to lack just those features, Inhibition, Summation, Rhythm, After-discharge, which give to central conduction its flexibility and its means of adaptation to specific ends. There is no need to press this point further the differences between peripheral conduction and conduction in the reflex arc form a common theme for the academic essay of the elementary student. The Aesthetic Animal Dec 16 2019 The Aesthetic Animal answers the ultimate questions of why we adorn ourselves, embellish our things and surroundings, and produce art, music, song dance, and fiction. Humans are aesthetic animals that spend vast amounts of time and resources on seemingly useless aesthetic activities. However, nature would not allow a species to waste precious time and effort on activities completely unrelated to survival, reproduction, and the well-being of that species. Consequently, the aesthetic impulse must have some important biological functions. A number of observations indicate that the aesthetic impulse is an inherent part of human nature, and therefore a primary impulse in its own right with several important functions: The aesthetic impulse may guide us toward what is biologically good for us, and help us choose the right fitness enhancing items in our surroundings. It is a valid individual fitness indicator as well as a unifying social group marker, and aesthetically skilled individuals get more mating possibilities, higher status and more collaborative offers. The book is written in a lively and entertaining tone, with beautiful color illustrations. It covers a wide field of aesthetic behaviors from cave art, graffiti, tattoos, and piercings over fashion, design, music, song, and dance. It presents an original and comprehensive synthesis of the empirical field, synthesizing data from archeology, cave art, anthropology, biology, ethology, behavioral- and evolutionary psychology and neuro-aesthetics. It is a must-read for people interested in biology, psychology, anthropology, architecture, design, fashion, body culture, art, and the evolution of aesthetics.

The Categorical Impulse Nov 14 2019 Classification, as an object of recent anthropological scrutiny came to prominence during the 1960s, exemplified in the British (constructionist) tradition by the writings of Mary Douglas, and in the American ethno-semantics (cognitive) tradition by the likes of Harold Conklin and Brent Berlin. At the time, these approaches seemed by turns to contradict each other, or even to exist in parallel universes. However, over the last 30 years we have witnessed both a renewed interest in classification studies as well as a cross-fertilization of these once antagonistic approaches. These essays by one of leading scholars in this field bring together a body of influential and inter-linked work which attempts to bridge the divide between cultural and cognitive studies of classification, and which develops a more embedded and processual approach. In particular, the essays focus on people's categorization of natural kinds as a means through which to obtain an understanding of how classifying behavior in general works, engaging with the ideas of both anthropologists and psychologists. The theoretical background is set out in an entirely new and substantial introduction, which also provides a comprehensive and systematic review of developments in cognitive and social anthropology since 1960 as these have impacted on classification studies. In short, it constitutes a useful and approachable introduction to its subject.

Free-Field Stagnation Pressure and Impulse from a High Explosive Detonation in a Model Underground Storage Facility Nov 07 2021 Results are presented from high-explosive (PETN) model tests conducted to determine free-field stagnation pressures and impulses produced by simulated underground chamber/tunnel explosions. The model consisted of a 1:50 scale, smooth, chamber/tunnel configuration with a converging area change. Internal side-on pressures and external side-on and stagnation pressures were measured as a function of chamber-charge loading density and external test-bed type (i.e., sand or plywood). Results of the tests indicate that the ratio of stagnation pressure to side-on pressure is dependent on terrain at the tunnel exit. Keywords: Underground explosions; Tunnels; Airblast/overpressure; Munition storage; Blast waves; Stagnation pressure; Underground storage; Stagnation impulse. (edc).

[The Radical Impulse](#) Jul 03 2021 The period from the mid-1930s to the end of the 1950s in India saw the cultural expression of a wide range of political sentiments and positions around imperialism, fascism, nationalism, and social transformation. It was a period that covered a crucial transitional phase: from colonialism to a postcolonial context. This transitional period in India coincided with a vibrant radical ethos in many other parts of the world where, among numerous political issues, the aesthetics-politics relationship came to be articulated and debated in unprecedented ways. No history of this period can be written without giving an account of the departures, inventions, and reinventions made by the Indian People's Theatre Association (IPTA) in the fields of drama, music, and dance. Yet music, a very important part of the IPTA's creations as well as the connecting link between the various artistic forms, has not been studied as part of the history of the IPTA movement. This book attempts to fill this gap in knowledge about the vast musical repertoire of the IPTA. It is about the IPTA tradition's music in a national as well as specifically regional contexts (Bengali, Malayalam, Telugu, Assamese, and Hindu/Urdu in particular), situated within the overall cultural and political context of the transitional period in India, and in the context of a radical impulse emergent in many parts of the world from the beginning of the twentieth century. The book is the culmination of an archiving-cum-documentation project of music in the IPTA tradition undertaken by the author. It can also be read as a songbook, including lyrics and musical scores, revivifying the songs and music of a radical impulse in South Asia.

The Pietist Impulse in Christianity May 01 2021 Pietism is a reform movement originating among German Lutherans in the 17th century. It focused on personal faith, reacting against Lutheran Church's emphasis on doctrine and theology over Christian living. The movement quickly expanded, exerting an enormous influence on various forms of Christianity, and became concerned with social and educational matters. Indeed, Pietists showed a strong interest in issues of social and ecclesial reform, the nature of history and historical inquiry, the shape and purpose of theology and theological education, the missional task of the church, and social justice and political engagement. Though, the movement remained largely misunderstood, especially in Anglo-American contexts: negative stereotypes depicted Pietism as a quietist and sectarian form of religion, merely concerned with the 'pious soul and its God'. The main proposal of the editors of this volume is to correct this misunderstanding: assembling a deep collection of essays written by scholars from a variety of fields, this work demonstrates that Pietism was a movement characterized by great depth and originality. Besides, they show the vitality and impulse of Pietism today and emphasize the ongoing relevance of the movement for contemporary problems and questions.
